

Storing Your Lantern

Flame may be extinguished by blowing into the top of the lantern. After the lantern has cooled you may close it by pushing the upper body back into the lower body. Lock the bail under the base and your lantern is ready for storing. The plastic tube, or storage bag that your lantern comes in, works great to store your candle lantern or other small items such as extra candles and matches. **Warning: Do not attempt to touch the heat shield or close this lantern until it has cooled sufficiently.** Remember not to store your lantern while it is still hot.

Precautions

The heat shield on top of the lantern is extremely hot during operation, and retains its heat even after the flame is extinguished. Ensure that you provide adequate distance between lighted lantern and any flammable or meltable materials. Tent fabrics can melt or ignite, even if treated with fire retardant chemicals. Never leave a burning candle unattended.

Store your lantern and spare candles in a cool place to prevent melting of wax. Protect your lantern from impacts and dropping that may cause the glass chimney to break. If your glass chimney becomes broken, use extreme caution when removing broken pieces.

Shown above are UCO's three lanterns; Mini, Candelier; and The Original Candle Lantern.

Additional UCO products

Candles Our specially formulated candles minimize dripping, are clean burning and last over 9 hours. Available in regular or citronella scented.

Storage Sacks Protect your lantern when not in use with our neoprene or pile bags.

Reflectors Direct light where needed with either the original or the Pacflat reflector.

We want to hear from you!

We pride ourselves on listening to our customers. If you have a question, a suggestion for improving our products, or a recommendation of an accessory that could enhance your use of your candle lantern, call us or drop us a line. If you need replacement parts, additional candles, or Lanterns contact your nearest Candle Lantern Retailer or UCO Corporation for assistance.

the original candle lantern

made in the USA
by UCO Corporation

Use your
Candle Lantern
almost anywhere:

back country
camping
boating
patio dining
power outages

- provides warm, romantic light
- safe, lightweight, reliable
- each candle burns over 9 hours
- lifetime warranty

Congratulations on your purchase of the Original Candle Lantern by UCO Corporation.

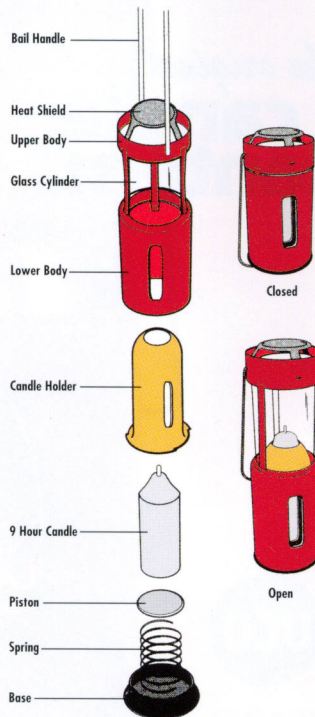

Made exclusively in the USA since 1981 by people who take great pride in their skills to produce the finest rugged Candle Lantern available. An essential product for every household and campsite. Our patented design provides hours of safe, trouble free light and warmth for your home or tent. The spring loaded candle chamber keeps flame height constant and uses our specially formulated candles that burn over nine hours. Small view window displays remaining candle life.

Our Candle Lantern is available in polished aluminum, polished brass, and a rainbow of assorted colors. In use, the lantern stands 6.5" (10" with bail extended) and telescopes closed to a compact 4.75". Aluminum and colored models weigh approximately 6 ounces. Brass weighs only 8 ounces.

Your new "Candle Lantern" comes to you ready for immediate use. Before using, acquaint yourself with the various parts.

To Light Candle Open your lantern by swinging the wire bail handle from its locked position under the lantern base. Slide the upper body out of the lower body by holding the lantern base with one hand while pulling up on the bail and/or upper body with the other hand. **Be sure that the upper body is fully extended before proceeding.** Next, holding the lower body with one hand, use your other hand to slide the glass chimney down to expose the candle wick (see illustration). Light the candle and immediately slide glass back up to its original position.

The lantern may now be hung by the bail or set firmly on its base. Alternative: the candle may also be lit by removing the candle holder assembly from the lower body by turning the base counter clockwise. Clean away any excess wax and insert new candle. Place the piston against the bottom of the new candle and, compressing the spring against the piston, replace the candle holder onto the base by turning clockwise. Insert base back into lower body and twist to lock in place.

To Clean or Replace Glass

With the lantern in its closed position, remove the candle holder assembly by turning the base counter clockwise. Reach into lower body and gently pull glass out. **If glass has broken, use extra caution when removing broken pieces.** After cleaning, return the glass by inserting into lower body (be sure to position the glass between the three upper body legs). Insert candle holder assembly and lock into position.

To Change Candle Remove the base from the candle holder by turning it counter clockwise. Clean away any excess wax and insert new candle. Place the piston against the bottom of the new candle and, compressing the spring against the piston, replace the candle holder onto the base by turning clockwise. Insert base back into lower body and twist to lock in place.
